BUMPER CARS

MAIN FEATURES

Chassis	:	Manufactured from cold, rolled steel in various sections formed and welded			
Body	:	Fiberglass construction with colours molded into fiberglass.			
Seat/Dash Pad	:	Fiberglass structure covered with high density polyurethane foam.			
Trims	:	Stainless steel.			
Lens	:	High impact and plastic light lenses.			
Tire	:	Pneumatic bumper tire. Operative pressure max 1,8 kg/cm ² (27 lbs/sq. inch).			
Motor	:	DC electric motor operating from 70 to 115 volt. Internal clutch and transmission. Operating power 0.78 kw.			
		Length	1,940 mm	(6'4")	
		Width	1.220 mm	(4'0")	
		Height	780 mm	(2'7")	Headrest
		Height	2,850 mm	(9'4")	Recommended Ceiling Height
Weight	:	215 kg (474 lbs.)			

MAINTENANCE

This bumper car has been built for heavy operation with all parts and components being selected and manufactured to keep maintenance at the minimum level.

In order to obtain the best performance and lengthen the life of the various components, we suggest the following maintenance program.

AFTER INITIAL FEW DAYS OF OPERATION, CHECK FOR TIGHTNESS OF ALL ELECTRICAL CONNECTIONS AND MOUNTING BOLTS AND NUTS.

DAILY MAINTENANCE

- A. Check all bulbs. Lights are wired in series so that rugged 12 volt or 24 volt bulbs can be used. If one bulb burns out, the remaining bulbs in the circuit will fail. In order to check the position of the burnt bulb, we have equipped each headlight set with a warning bulb (the bulb should be changed when the warning light is on).
- B. Clean and apply to the external side of the pneumatic tire a white mixture, prepared in advance, composed of 1 kg talc powder dissolved into 10 liters water. Application of this material will provide protection and avoid damage due to friction of tires against another or against the steel bumper rail around the floor. Normal life of a tire can be extended to as much as 10 years if this mixture is applied daily.
- C. Clean and apply to the bumper rail of the building the same white mixture as per point B.
